

ABSTRACT

It is important to remember that people living with a disability are just like other people. They have their own individual identity, they feel the emotions as we do, they will have personal interests and hobbies, and they will have goals, dreams and desires. Each of them have specific capabilities to make the production of particular handicrafts like seed pen, umbrella, floor mat, bags etc. It is our duty empower the qualities and abilities of the disabled peoples. There are many talented people with disabilities who are skilled yet have no platforms to put up their works . The project entitled “KALIKA” is an web application.

This project provide a online platform for the Disabled Persons to selling their Manufactured Product to Public, Online doctor consultations and Pharmacies for Purchasing Medicine by Disabled Persons in Less Cost. So the project is also aims to provide a comprehensive platform for individuals with disabilities to access affordable medicine. The project will involve three main components: a product selling project for individuals with disabilities, online doctor consultation and pharmacies for purchasing medicine in less cost. The product selling project will provide individuals with disabilities for a platform for selling product to public. Free Online doctor consultation is a service that allows disabled user to speak with licensed healthcare providers through digital platforms, such as video or chat. The pharmacy component of the project will provide individuals with disabilities access to affordable medication. In each pharmacies update their discount .
